▼ Is there a way for uploaders to chat and exchange info?

Yes. We have a dedicated IRC channel. PM zdeev on IRC to get access.

▼ I've bribed my way into the uploaders class, how do I actually upload?

[Uploading in general](#) 81

[Vuze/uTorrent](#) 15

▼ How come I can't start seeding immediately after creating a torrent?

The tracker adds the 'source'-tag to a torrent file, if not present when that file has been created. Use mktorrent or any other means that let you add the 'source'-tag. Or just re-download the file after you've uploaded it. Use mktorrent with `-s "TorrentLeech.org"` that'll set the source tag. You'll need the latest stable mktorrent version. If you don't wanna use mktorrent, python has some nice bencode libraries where you can set that stuff manually but that's a bit trickier.

▼ I'm getting an error: Could not parse bencoded data

There is something wrong with the \*.torrent file you've created. Check if it can be solved by re-downloading the file from the tracker. If not then get in touch with staff.

▼ What is this error 600 I'm seeing?

It means the torrent link you are opening up doesn't exist. It can either mean that the torrent has been deleted, or you are viewing the link right after uploading the torrent. In the last case you can F5 a few times and it will show up. Once it's been deleted you will see the 600 error each time you visit that page.

▼ Any help with naming conventions?

Sure, read up on them [here](#) 46 .

▼ What goes into what category?

Check out [this thread](#) 46 .

▼ What HTML code can I use in NFO's?

- 'a' => only attributes 'href', 'target', 'name'
- 'img' => only attributes 'src', 'alt'
- 'span' => only attribute 'style'
- 'b', 'strong', 'em', 'i', 'u', 'li', 'ol', 'p', 'br'
- avatar, center, font and colour

This FAQ is the most important so far of the threads I have read on TL Uppers Forums.

Compiling MkTorrent for x64win or using cygwin would be another useful guide for acquisition of the current version of mktorrent at the time a user becomes a upper and wants the latest and greatest.
